***„Probing non equilibrium quantum fields
with cold atoms“***

Abstract:

Ultra cold quantum gases are an ideal system to probe many body physics and quantum fields.

In this talk I will give an overview of the different possibilities and what we were able to learn about many body systems and their underlying quantum description.

Zeit: Donnerstag, 21.1.2016, 14.00

Ort: Arbeitsgruppe Gravitation, Währinger Straße 17,
„Kavalierstrakt“ 1. Stock, Victor-Franz-Hess-Hörsaal
